

David Shapera

Incident Commander

Magellan Aerospace

Started working at Bristol / Magellan aerospace in 1988 at our Rockwood Manitoba Facility. (15 north of Winnipeg).

After high school went to U of M and completed a Bachelor of Science (math and physics). I then went to Red River College for mechanical engineering technology.

I was a hired after red river as an inspector at the Rockwood facility operating a CMM machine (co-ordinate measuring machine) which measures circles, distances, angles and true positions highly accurately down to .001". I also carried out general inspections in receiving as well as in process product Inspections to verify product met drawing requirements.

I joined the ERT group almost right away after being hired, I really liked the idea of being able to help my fellow employees if my assistance was needed.

My ERT training encompassed dealing with Fires (mostly grass fires) medical emergencies and Hazardous material cleanup. As part of the ERT we are throughout the years updating training and recertifying on courses that are identified as requirements for the ERT group

I moved from the Rockwood facility to the Winnipeg plant on Ellice and Berry Street around 2005.

For the last 5 years I have been identified as the "INCIDENT COMMANDER" for medical and Emergencies throughout the plant such as fire, evacuation, hazardous material release / cleanup, flooding, gas leaks, power outages and Fire alarms throughout the plant.
